

The Green OT Certification

-The Internationally acknowledged Green OT certification is a newly introduced recognition which rates the facility as per its quality of safety and medical amenities available in the Operating Theatre.

The Green OT Certification covers the following parameters:

- Pre operative/ intra operative/ post operative patient care.
- Infection control inside operating room.
- Electrical safety inside operating room.
- Fire safety inside operating room.
- Waste management system.
- Highly skilled surgical, anesthesia team and well trained nursing staff.
- Calibrated equipments inside operation theatre ensuring accurate delivery of the drugs.
- Measures to reduce OT pollution with regard to environment.
- Raising the bar of safety in OT.

The Green OT Certification also ensures that emission of carbon dioxide, infrared rays and radiation are within permissible limits.

Fortis, Anandapur is now a Green OT certified hospital as the OT is now generating less carbon foot print, having effective passive scavenging system and reducing the use of N₂O stringer infection control practice is maintained with adherence to various electrical and fire safety protocols.

In an initiative to promote sustainable healthcare delivery and create a benchmark for performance in operation theatres (OT) across India, Abbott India joins hands with Bureau VERITAS Certifications (India) to provide a first of its kind accreditation for using green and safe practices in operation theatres.
